Frontend Developer / Data Scientist / Researcher

I have background as a research scientist with experience in quantitative and qualitative methodologies and tools. Since 2018 I have incorporated programming and data science into my daily work to improve my skills by learning new technologies and languages to create web applications, and manipulate and analyze data. Today I have experience as a frontend developer and as a data scientist with an emphasis on mobile development and machine learning, respectively. I would like to join a company that gives me the opportunity to put all this experience into practice and continue developing my career.

WORK EXPERIENCE

Plural Business Anthropology 2018 - 2021 Researcher and Frontend Developer

Generation of applicable insights for the development of products and services. Data cleaning, data analysis and data visualization. Design of web application prototypes, such as dashboards, online stores, expense trackers, quizzes, blogs, and others.
